Saliva SARS-Cov-2(2019-nCoV) Antigen Combined Test Kit (Nanocarbon Assay)

It is a lateral immunochromatographic assay for detecting the N and S protein of 2019-nCoV virus in human saliva samples. It was used in the early symptomatic population infected with 2019-nCoV virus. It is convenient and quick. The test can be operated and interpreted by yourself in 15 minutes. There is no need for sample collection, storage, transportation, and any instrument.

Test Procedure

Sample collection method A

Sample collection method B
